EDUCATION

George Washington University <i>Master of Science, Data Science (GPA 3.74)</i> Relevant Coursework: <i>Machine Learning, Deep Learning, NLP, Data Mining, Cloud Computing, Time Series Analysis</i>	Washington, DC Expected May 2026
Manipal University Jaipur <i>Bachelor of Technology, Computer Science and Engineering</i> Relevant Coursework: <i>Algorithms & Data Structures, Database Management Systems</i>	Rajasthan, India May 2024

PROFESSIONAL EXPERIENCE

Lumina Datamatics
Machine Learning Engineer Feb 2024 – Aug 2024

- Developed processing pipelines and fine-tuned Computer Vision models to detect and extract complex equations from documents, achieving high precision in unstructured data extraction. Refactored the existing document layout parsing pipeline, improving accuracy by 16% and reducing inference latency by 0.3ms per page.
- Built a Retrieval-Augmented Generation system for legal document search. Optimized vector embeddings and indexing strategies to improve search relevance and reduce query time from minutes to seconds.
- Operationalized models on AWS SageMaker, ensuring scalability to handle 10,000+ documents.

HCL Technologies, Noida, India
Machine Learning Intern Jul 2023 – Sept 2023

- Built predictive models using scikit-learn to analyze workforce productivity for 500+ employees. utilized Logistic Regression and Random Forest to identify key drivers of performance.
- Engineered new data driven KPIs from raw activity logs (screen time, app usage) using SQL and Python, identifying patterns that correlated with high-performance clusters.
- Designed interactive Tableau dashboards to visualize productivity trends, enabling management to make data-driven workforce planning decisions.

Ernst & Young, Gurgaon, India
Summer Intern May 2023 – Jul 2023

- Developed Power BI dashboards for Sales & HR, visualizing KPIs such as revenue trends and attrition rates to support strategic planning.
- Automated ETL workflows using Alteryx, cleaning and transforming raw data from multiple sources to ensure 100% reporting accuracy.

PROJECT EXPERIENCE

[Multimodal Financial Time Series Forecasting](#) Jan 2026 – Present

- Designing GNN-based multimodal architecture fusing LSTM (time series), FinBERT (sentiment), and graph networks to model inter-sector dependencies for stock prediction using FinMultiTime dataset with attention-based late fusion strategy.

[Edge-Based PII Detection & Censoring System](#) Sept – Dec 2025

- Architected privacy-preserving system with 4 transformer architectures (DeBERTa-v3-base, DistilBERT, BERT+CRF, BiLSTM-CRF) for on-device PII detection across 54 entity types; achieved 98.1% F1-score and 97.9% recall with DeBERTa, deployed via ONNX for <100ms inference.
- Built production Streamlit demo with Tesseract OCR for PDF/image processing, pipeline for model training, and SHAP/LIME explainability analysis.

PROFESSIONAL SKILLS

Programming Languages: Python, R
Libraries and Frameworks: pandas, numpy, scikit-learn, matplotlib, seaborn, PyTorch, TensorFlow, Hugging Face
Data Management: SQL, MySQL, AWS, Google Cloud Platform
Visualization: Power BI, Tableau, Streamlit
